

RECEPTION

RECEPTION

Coming up next week...5/5/25

Nower Wood Thursday 8th May 2025

*We are looking forward to a great day out. All children will need a small backpack to carry their lunches and their **own reusable water bottle** - please remember to supply a lunch for your child if you have not signed up for a school lunch.*

At the moment the weather on Thursday is looking dry. Should it look like it may rain, please supply your child with a named raincoat that will fit in their bag. Children will need a sun hat and have had sun cream applied before school. No sunglasses please.

If needed, please ensure that they have been given any hay fever medication as we will be outside all day.

Children must wear long trousers as there may be ticks or nettles in the woods (please read the information below carefully).

The coach will leave promptly, so please drop your child at school on time (8.40am). We expect to return to school before pick up time (2:30).

Please continue bringing in any junk modelling. Smaller boxes, egg boxes, milk lids, toilet roll tubes, plastic bottles etc are more useful than very large boxes!

Reception will be doing PE on Wednesday and Friday this term, please send your child into school wearing their PE kit on these days.

Learning in school:

Theme for the Term: Minibeasts!

This half term, we will be learning about a variety of minibeasts and looking at similarities and differences between them and where we find them.

Theme for the Week:

This week we are reading the story The Very Quiet Cricket, writing our own minibeast stories and creating puppets to help tell their stories. On Wednesday afternoon we will discuss what will happen on our school trip to Nower Wood and what we might see or do during our visit. On Friday we will create a timeline using photos from the school trip to reflect on our visit.

Phonics:

This week in Phonics we will be focussing on reading and writing CVCC and CCVC words with phase 3 long vowel sounds ai ee igh oa oo oo ar or ur ow oi ear air er and Phase 2 digraphs ck sh th ch ng nk. We will also be learning the tricky words, were, here, little, says.

Maths:

In maths this week, we are learning how to add more than 1 more to an amount. The children will be using teddies to exploring adding 2,3,4 or 5 more to a group.

Additional notes and reminders

Homework

Maths homework can be found in the blue homework folders in your child's bookbag. Homework folders will be collected in the same day that sounds folders are collected in.

Please continue reading with your child as often as you can and practising the sounds in their sound folder.

Class email addresses:

turtles@mead.surrey.sch.uk

starfish@mead.surrey.sch.uk

jellyfish@mead.surrey.sch.uk

Please note that as the week progresses it is sometimes necessary to change what is planned to meet the learning needs of the children and therefore changes to the above may occur.

Enjoy the outdoors but **'be tick aware'**

'Be tick aware' to avoid tick bites and know how to take action if you or your family get bitten by ticks

Tick sizes compared to a one penny coin

What are ticks?

Ticks are small, spider-like creatures that feed on the blood of animals, including people. The size of a tick can vary, with a larva being as small as a tiny freckle, and fully fed females similar in size to a baked bean.

Where do you find ticks?

Ticks survive in many habitats, but prefer moist areas with leaf litter or longer grass, like in woodland, grassland, moorland, heathland and some urban parks and gardens.

Ticks don't fly or jump. They wait on vegetation for a host to pass by, and then climb on. They bite and attach to the skin and feed on blood for several days, before dropping off. Ticks are found throughout the year, but are most active between spring and autumn.

Main health risks

- ticks can sometimes transmit microbes that may cause human diseases such as Lyme disease and tick-borne encephalitis (TBE), though TBE is rare in the UK. It is important to be tick aware and see your GP promptly for diagnosis and treatment if you recognise the symptoms of tick-borne diseases which can include:
 - a flu-like illness, fatigue and muscle and joint pain
 - a characteristic expanding red rash, known as erythema migrans (present in many but not all cases)
 - persistent headache, confusion or sensitivity to bright light
- you may not always remember being bitten by a tick, so if you have spent time outdoors and develop any of these symptoms, seek advice from your GP or dial NHS 111
- Lyme disease can be treated with a course of antibiotics. Without treatment, more serious conditions can develop such as swelling in some joints or problems with the nerves and heart, so prevention and early detection are key
- rarely ticks transmit tick-borne encephalitis (TBE), however the risk in the UK is very low. Symptoms include flu-like illness, persistent headache, confusion and sensitivity to bright light

Avoiding ticks

- walk on clearly defined paths to avoid brushing against vegetation
- wear light-coloured clothes so ticks can be spotted and brushed off
- use repellents such as DEET
- carry out a tick check

Carry out a tick check

Make it a habit to check your clothes and body regularly for ticks when outdoors and again when you get home. Check your children and pets as well.

Areas that ticks may frequently be found include skin folds, armpits, groin, waistband area, back of the neck and hairline. Data from UKHSA's Tick Surveillance Scheme shows that adults are commonly bitten on the legs, whilst children are commonly bitten on the head or neck area. It is important to remember, however, that bites can occur on any part of the body and more than one tick can be attached at one time.

If you have been bitten

- remove ticks as soon as possible
- the safest way to remove a tick is to use a pair of **fine-tipped** tweezers or a tick removal tool
- grasp the tick as close to the skin as possible
- pull upwards slowly and firmly, as mouthparts left in the skin can cause a local infection
- clean the bite area with antibacterial wash/soap and water, and monitor it for several weeks for any changes
- contact your GP promptly if you begin to feel unwell with flu-like symptoms or develop a spreading circular red rash. Remember to tell them you were bitten by a tick or have recently spent time outdoors

Tick removal with tweezers

Tick in the environment

Tick attached to skin

Lyme disease bullseye rash

Tick found under hair

Key tick awareness messages

- **'be tick aware'** and remember that you could be exposed to ticks whenever you spend time outdoors, including when in your garden or the local park
- ticks mainly attach to animals, but sometimes they may bite you or your family. It is important to remember that bites can occur on any part of the body and more than one tick can be attached at a time
- you can reduce the chance of tick bites by walking on clearly defined paths, using insect repellent and performing **regular tick checks**
- some tick bites can result in infection, so it is important to remove ticks safely and as quickly as possible
- the safest way to remove a tick is by using a pair of **fine-tipped** tweezers or a tick removal tool
- if you begin to feel unwell with flu-like symptoms, or develop a spreading circular rash (which usually appears within 1 to 4 weeks after being bitten), **contact your GP or dial NHS 111 promptly**
